## **DETAILED ACTION**

### ***Claim Rejections - 35 USC § 103***

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-19 are rejected under 35 U.S.C. 103(a) as being unpatentable over Yamamoto et al. (US Pat. 7,318,960) in view of Keita et al. (US Pat. 6,887,401).

Yamamoto discloses a polarizing molded article, comprising a polarizer sheet in between two protective sheet layers that are adhered to the polarizer sheet with an adhesive layer on each side (see col. 5, ln. 13-20). The polarizer sheet is polyvinyl alcohol (see col. The adhesive comprises polythiourethane (see col. 5, ln. 22-23).

Yamamoto differs from the presently claimed invention because the reference does not specifically teach a mixture of polythiourethanes in the adhesive.

Keita discloses an optical lens comprising a substrate made of a mixture of a polythiourethane prepolymer having isocyanate or isothiocyanate end groups and a polythiourethane prepolymer having thiol end groups (see abstract).

Therefore, it would have been obvious to one of ordinary skill in the art to have employed the polythiourethane mixtures, as taught by Keita, in the adhesive layer of Yamamoto in order to obtain an optical lens free from defect like striations.
